1. Purpose

The International Institute for Restorative Practices (IIRP) has a particular way of defining restorative and related terms that is consistent throughout our courses, events, videos and publications. We have developed our definitions to facilitate communication and discussion within the framework of our own graduate school and for those who are part of our restorative community.

For example, at one of our symposia, a young man insisted that his school already held conferences with students and their families, not realizing that most of the other participants at the event were not referring to a generic conference, but to a restorative conference. A restorative confer-

ence is a specific process, with defined protocols, that brings together those who have caused harm through their wrongdoing with those they have directly or indirectly harmed.

Others have defined teen courts, youth aid panels or reparative boards as restorative justice, while the IIRP defines those processes as community justice, not restorative justice. Such community justice processes do not include an encounter between victims and offenders, which provides an opportunity to talk about what happened and how it has affected them (Van Ness & Strong, 2015). Rather, these courts, panels and boards are comprised of appointed community members who have no real emotional stake in the incident. These bodies meet with offenders, but victims, their families and friends are not generally invited. Restorative justice, in contrast, offers victims and their supporters an opportunity to talk directly with offenders.

Our purpose is not to label other processes or terms as positive or negative, effective or ineffective. We respect the fact that others may define terms differently and, of course, have every right to do so. Rather, we simply want to define and share a consistent terminology to create a unified framework of understanding.

2. Overview

Restorative practices is a social science that studies how to build social capital and achieve social discipline through participatory learning and decision-making.

The use of restorative practices helps to:

- reduce crime, violence and bullying
- improve human behavior
- strengthen civil society
- provide effective leadership
- restore relationships
- repair harm

The IIRP distinguishes between the terms restorative practices and restorative justice. We view restorative justice as a subset of restorative practices. Restorative justice is reactive, consisting of formal or informal responses to crime and other wrongdoing after it occurs. The IIRP's definition of restorative practices also includes the use of informal and formal processes that precede wrongdoing, those that proactively build relationships and a sense of community to prevent conflict and wrongdoing.

Where social capital—a network of relationships—is already well established, it is easier to respond effectively to wrongdoing and restore social order—as well as to create a healthy and positive organizational environment. Social capital is defined as the connections among individuals (Putnam, 2001), and the trust, mutual understanding, shared values and behaviors that bind us together and make cooperative action possible (Cohen & Prusak, 2001).

In public health terms, restorative justice provides tertiary prevention, introduced after the problem has occurred, with the intention of avoiding reoccurrence. Restorative practices ex-

pands that effort with primary prevention, introduced before the problem has occurred.

The social science of restorative practices offers a common thread to tie together theory, research and practice in diverse fields such as education, counseling, criminal justice, social work and organizational management. Individuals and organizations in many fields are developing models and methodology and performing empirical research that share the same implicit premise, but are often unaware of the commonality of each other's efforts.

For example, in criminal justice, restorative circles and restorative conferences allow victims, offenders and their respective family members and friends to come together to explore how everyone has been affected by an offense and, when possible, to decide how to repair the harm and meet their own needs (McCold, 2003). In social work, family group decision-making (FGDM) or family group conferencing (FGC) processes empower extended families to meet privately, without professionals in the room, to make a plan to protect children in their own families from further violence and neglect or to avoid residential placement outside their own homes (American Humane Association, 2003). In education, circles and groups provide opportunities for students to share their feelings, build relationships and solve problems, and when there is wrongdoing, to play an active role in addressing the wrong and making things right (Riestedberg, 2002).

These various fields employ different terms, all of which fall under the rubric of restorative practices: In the criminal justice field, the phrase used is "restorative justice" (Zehr, 1990); in social

work, the term employed is "empowerment" (Simon, 1994); in education, talk is of "positive discipline" (Nelsen, 1996) or "the responsive classroom" (Charney, 1992); and in organizational leadership, "horizontal management" (Denton, 1998) is referenced. The social science of restorative practices recognizes all of these perspectives and incorporates them into its scope.

3. History

Restorative practices has its roots in restorative justice, a way of looking at criminal justice that emphasizes repairing the harm done to people and relationships rather than only punishing offenders (Zehr, 1990).

In the modern context, restorative justice originated in the 1970s as mediation or reconciliation between victims and offenders. In 1974 Mark Yantzi, a probation officer, arranged for two teenagers to meet directly with their victims following a vandalism spree and agree to restitution. The positive response by the victims led to the first victim-offender reconciliation program, in Kitchener, Ontario, Canada, with the support of the Mennonite Central Committee and collaboration with the local probation department (McCold, 1999; Peachey, 1989). The concept subsequently acquired various names, such as victim-offender mediation and victim-offender dialogue, as it spread through North America and to Europe through the 1980s and 1990s (Umbreit & Greenwood, 2000).

Restorative justice echoes ancient and indigenous practices employed in cultures all over the world, from Native American and First Nation Canadian to African, Asian, Celtic, Hebrew, Arab and many others (Eagle, 2001; Goldstein, 2006; Haarala, 2004; Mbambo &

Skelton, 2003; Mirsky, 2004; Roujanavong, 2005; Wong, 2005).

Eventually modern restorative justice broadened to include communities of care as well, with victims' and offenders' families and friends participating in collaborative processes called conferences and circles. Conferencing addresses power imbalances between the victim and offender by including additional supporters (McCold, 1999).

The family group conference (FGC) started in New Zealand in 1989 as a response to native Maori people's concerns with the number of their children being removed from their homes by the courts. It was originally envisioned as a family empowerment process, not as restorative justice (Doolan, 2003). In North America it was renamed family group decision making (FGDM) (Burlford & Pennell, 2000).

In 1991 the FGC was adapted by an Australian police officer, Terry O'Connell, as a community policing strategy to divert young people from court. The IIRP now calls that adaptation, which has spread around the world, a restorative conference. It has been called other names, such as a community accountability conference (Braithwaite, 1994) and victim-offender conference (Amstutz & Zehr, 1998). In 1994, Marg Thorsborne, an Australian educator, was the first to use a restorative conference in a school (O'Connell, 1998).

The International Institute for Restorative Practices (IIRP) grew out of the Community Service Foundation and Buxmont Academy, which since 1977 have provided programs for delinquent and at-risk youth in southeastern Pennsylvania, USA. Initially founded in 1994 under the auspices of Buxmont Academy, the Real Justice program, now an

IIRP program, has trained professionals around the world in restorative conferencing. In 1999 the newly created IIRP broadened its training to informal and proactive restorative practices, in addition to formal restorative conferencing (Wachtel, 1999). Since then the IIRP, an accredited graduate school, has developed a comprehensive framework for practice and theory that expands the restorative paradigm far beyond its origins in criminal justice (McCold & Wachtel, 2001, 2003). Use of restorative practices is now spreading worldwide, in education, criminal justice, social work, counseling, youth services, workplace and faith community applications (Wachtel, 2013).

Figure 1. Social Discipline Window

4. Supporting Framework

The IIRP has identified several concepts that it views as most helpful in explaining and understanding restorative practices.

4.1. Social Discipline Window

The social discipline window (Figure 1) is a concept with broad application in many settings. It describes four basic approaches to maintaining social norms and behavioral boundaries. The four are represented as different combinations of high or low control and high or low support. The restorative domain combines both high control and high support and is characterized by doing things *with* people, rather than *to* them or *for* them.

The social discipline window also defines restorative practices as a leadership model for parents in families, teachers in classrooms, administrators and managers in organizations, police and social workers in communities and judges and officials in government. The fundamental unifying hypothesis

of restorative practices is that “human beings are happier, more cooperative and productive, and more likely to make positive changes in their behavior when those in positions of authority do things with them, rather than to them or for them.” This hypothesis maintains that the punitive and authoritarian *to* mode and the permissive and paternalistic *for* mode are not as effective as the restorative, participatory, engaging *with* mode (Wachtel, 2005).

The social discipline window, whose dynamics of low versus high support and control were originally modelled by the work of University of Illinois corrections researcher Daniel Glaser, reflects the seminal thinking of renowned Australian criminologist John Braithwaite, who has asserted that reliance on punishment as a social regulator is problematic because it shames and stigmatizes wrongdoers, pushes them into a negative societal subculture and fails to change their behavior (Glaser, 1964; Braithwaite, 1989). The restorative approach, on the other

hand, reintegrates wrongdoers back into their community and reduces the likelihood that they will reoffend.

4.2. Restorative Justice Typology

Restorative justice is a process involving the primary stakeholders in determining how best to repair the harm done by an offense. The three primary stakeholders in restorative justice are victims, offenders and their communities of care, whose needs are, respectively, obtaining reparation, taking responsibility and achieving reconciliation. The degree to which all three are involved in meaningful emotional exchange and decision making is the degree to which any form of social discipline approaches being fully restorative.

The three primary stakeholders are represented in Figure 2 by the three overlapping circles. The very process of interacting is critical to meeting stakeholders’ emotional needs. The emotional exchange necessary for meeting the needs of all those directly affected cannot occur with only one

Figure 2. Restorative Justice Typology

set of stakeholders participating. The most restorative processes involve the active participation of all three sets of primary stakeholders (McCold & Wachtel, 2003).

When criminal justice practices involve only one group of primary stakeholders, as in the case of governmental financial compensation for victims or meaningful community service work assigned to offenders, the process can only be called partly restorative. When a process such as victim-offender mediation includes two principal stakeholders but excludes their communities of care, the process is mostly restorative. Only when all three sets of primary stakeholders are actively involved, such as in conferences or circles, is a process fully restorative (McCold & Wachtel, 2003).

4.3. Restorative Practices Continuum

Restorative practices are not limited to formal processes, such as restorative conferences or family group conferences, but range from informal to formal. On a restorative practices continuum (Figure 3), the informal practices include affective statements that communicate people’s feelings, as well as affective questions that cause people to reflect on how their behavior has affected others. Impromptu restor-

ative conferences, groups and circles are somewhat more structured but do not require the elaborate preparation needed for formal conferences. Moving from left to right on the continuum, as restorative practices become more formal, they involve more people, require more planning and time, and are more structured and complete. Although a formal restorative process might have dramatic impact, informal practices have a cumulative impact because they are part of everyday life (McCold & Wachtel, 2001).

The aim of restorative practices is to develop community and to manage conflict and tensions by repairing harm and building relationships. This statement identifies both proactive (building relationships and developing community) and reactive (repairing harm and restoring relationships) approaches. Organizations and services that only use the reactive without building the social capital beforehand are less successful than those that also employ the proactive (Dav-ey, 2007).

4.4. Nine Affects

The most critical function of restorative practices is restoring and building relationships. Because informal and formal restorative processes foster the expression of affect or emotion, they also foster emotional bonds. The late Silvan S. Tomkins’s writings about psychology of affect (Tomkins, 1962, 1963,

Figure 3. Restorative Practices Continuum

Figure 4. The Nine Affects (adapted from Nathanson, 1992)

1991) assert that human relationships are best and healthiest when there is free expression of affect or emotion—minimizing the negative, maximizing the positive, but allowing for free expression. Donald Nathanson, former director of the Silvan S. Tomkins Institute, added that it is through the mutual exchange of expressed affect that we build community, creating the emotional bonds that tie us all together (Nathanson, 1998). Restorative practices such as conferences and circles provide a safe environment for people to express and exchange emotion (Nathanson, 1998).

Tomkins identified nine distinct affects (Figure 4) to explain the expression of emotion in all humans. Most of the affects are defined by pairs of words that represent the least and the most intense expression of a particular affect. The six negative affects include anger-rage, fear-terror, distress-anguish, disgust, dissmell (a word Tomkins coined to describe “turning up one’s nose” in a rejecting way) and

shame-humiliation. Surprise-startle is the neutral affect, which functions like a reset button. The two positive affects are interest-excitement and enjoyment-joy (Tomkins, 1962, 1963, 1991).

Silvan S. Tomkins (1962) wrote that because we have evolved to experience nine affects—two positive affects that feel pleasant, one (surprise-startle) so brief that it has no feeling of its own, and six that feel dreadful—we are hardwired to conform to an internal blueprint. The human emotional blueprint ensures that we feel best when we 1) maximize positive affect and 2) minimize negative affect; we function best when 3) we express all affect (minimize the inhibition of affect) so we can accomplish these two goals; and, finally, 4) anything that fosters these three goals makes us feel our best, whereas any force that interferes with any one or more of those goals makes us feel

worse (Nathanson, 1997b).

By encouraging people to express their feelings, restorative practices build better relationships. Restorative practices demonstrate the fundamental hypothesis of Tomkins’s psychology of affect—that the healthiest environment for human beings is one in which there is free expression of affect, minimizing the negative and maximizing the positive (Nathanson, 1992). From the simple affective statement to the formal conference, that is what restorative practices are designed to do (Wachtel, 1999).

4.5. Compass of Shame

Shame is worthy of special attention. Nathanson explains that shame is a critical regulator of human social behavior. Tomkins defines shame as occurring any time that our experience of the positive affects is interrupted (Tom-

Figure 5. The Compass of Shame (adapted from Nathanson, 1992)

kins, 1987). So an individual does not have to do something wrong to feel shame. The individual just has to experience something that interrupts interest-excitement or enjoyment-joy (Nathanson, 1997a). This understanding of shame provides a critical explanation for why victims of crime often feel a strong sense of shame, even though it was the offender who committed the “shameful” act (Angel, 2005).

Nathanson (1992) has developed the Compass of Shame (Figure 5) to illustrate the various ways that human beings react when they feel shame. The four poles of the compass of shame and behaviors associated with them are:

- Withdrawal—isolating oneself, running and hiding
- Attack self—self put-down, masochism
- Avoidance—denial, abusing drugs, distraction through thrill seeking
- Attack others—turning the tables, lashing out verbally or physically, blaming others

Nathanson says that the attack other response to shame is responsible for the proliferation of violence in modern life. Usually people who have adequate self-esteem readily move beyond their feelings of shame. Nonetheless we all react to shame, in varying degrees, in the ways described by the Compass. Restorative practices, by their very nature, provide an opportunity for us to express our shame, along with other emotions, and in doing so reduce their intensity. In restorative conferences, for example, people routinely move from negative affects through the neutral affect to positive affects (Nathanson, 1998).

4.6. Fair Process

When authorities do things with people, whether reactively—to deal with crisis—or proactively, the results are better. This fundamental thesis was evident in a *Harvard Business Review* article about the concept of fair process producing effective outcomes in business organizations (Kim & Mauborgne, 2003). The central idea of fair process is that “...individuals are most likely to trust and cooperate freely with systems—whether they themselves win or lose by those systems—when fair process is observed” (Kim & Mauborgne, 2003).

The three principles of fair process are:

- Engagement—involving individuals in decisions that affect them by listening to their views and genuinely taking their opinions into account
- Explanation—explaining the reasoning behind a decision to everyone who has been involved or who is affected by it
- Expectation clarity—making sure that everyone clearly understands a decision and what is expected of them in the future (Kim & Mauborgne, 2003)

Fair process demonstrates the restorative with domain of the social discipline window. It relates to how leaders handle their authority in all kinds of professions and roles: from parents and teachers to managers and administrators. The fundamental hypothesis of restorative practices embodies fair process by asserting that “people are happier, more cooperative and productive, and more likely to make positive changes in behavior when those in authority do things with them, rather

than to them or for them.”

5. Restorative Processes

The IIRP has identified several restorative processes that it views as most helpful in implementing restorative practices in the widest variety of settings.

5.1. Restorative Conference

A restorative conference is a structured meeting between offenders, victims and both parties’ family and friends, in which they deal with the consequences of the crime or wrongdoing and decide how best to repair the harm. Neither a counseling nor a mediation process, conferencing is a victim-sensitive, straightforward problem-solving method that demonstrates how citizens can resolve their own problems when provided with a constructive forum to do so (O’Connell, Wachtel, & Wachtel, 1999).

Conferences provide victims and others with an opportunity to confront the offender, express their feelings, ask questions and have a say in the outcome. Offenders hear firsthand how their behavior has affected people. Offenders may choose to participate in a conference and begin to repair the harm they have caused by apologizing, making amends and agreeing to financial restitution or personal or community service work. Conferences hold offenders accountable while providing them with an opportunity to discard the “offender” label and be reintegrated into their community, school or workplace (Morris & Maxwell, 2001).

Participation in conferences is voluntary. After it is determined that a conference is appropriate and offenders and victims have agreed to attend, the conference facilitator invites others

affected by the incident—the family and friends of victims and offenders (O’Connell, Wachtel, & Wachtel, 1999).

A restorative conference can be used in lieu of traditional disciplinary or justice processes, or where that is not appropriate, as a supplement to those processes (O’Connell, Wachtel, & Wachtel, 1999).

In the Real Justice approach to restorative conferences, developed by Australian police officer Terry O’Connell, the conference facilitator sticks to a simple written script. The facilitator keeps the conference focused but is not an active participant. In the conference the facilitator provides an opportunity to each participant to speak, beginning with asking open-ended and affective restorative questions of the offender. The facilitator then asks victims and their family members and friends questions that provide an opportunity to tell about the incident from their perspective and how it affected them. The offenders’ family and friends are asked to do the same (O’Connell, Wachtel, & Wachtel, 1999).

Using the conference script, offenders are asked these restorative questions:

- “What happened?”
- “What were you thinking of at the time?”
- “What have you thought about since?”
- “Who has been affected by what you have done?”
- “What do you think you need to do to make things right?”

Victims are asked these restorative questions:

- “What did you think when you realized what happened?”
- “What impact has this incident

had on you and others?”

- “What has been the hardest thing for you?”
- “What do you think needs to happen to make things right?”

Finally, the victim is asked what he or she would like to be the outcome of the conference. The response is discussed with the offender and everyone else at the conference. When agreement is reached, a simple contract is written and signed (O’Connell, Wachtel, & Wachtel, 1999).

Restorative conferencing is an approach to addressing wrongdoing in various settings in a variety of ways (O’Connell, Wachtel, & Wachtel, 1999):

- Conferencing can be employed by schools in response to truancy, disciplinary incidents, including violence, or as a prevention strategy in the form of role-plays of conferences with primary and secondary school students.
- Police can use conferences as a warning or diversion from court, especially with first-time offenders.
- Courts may use conferencing as a diversion, an alternative sentencing process, or a healing event for victims and offenders after the court process is concluded.
- Juvenile and adult probation officers may respond to various probation violations with conferences.
- Correctional and treatment facilities will find that conferences resolve the underlying issues and tensions in conflicts and disciplinary actions.
- Colleges and universities can use conferences with residence

hall and campus incidents and disciplinary violations.

- In workplaces, conferences address both wrongdoing and conflict.

Some approaches to restorative conferences, such as in Ulster in Northern Ireland, do not use the Real Justice script approach (Chapman, 2006). Victim-offender conferences do not rely on a script, either. Based on the earlier restorative justice model of victim-offender mediation, but widening the circle of participants, the victim-offender approach to conferences still relies on mediators who more actively manage the process (Amstutz & Zehr, 1998).

The IIRP prefers the Real Justice scripted model of conferencing because we believe it has the greatest potential to meet the needs of the stakeholders described in the Restorative Justice Typology. In addition, research shows that it consistently provides very high levels of satisfaction and sense of fairness for all participants (McCold & Wachtel, 2002). However, we do not mean to quibble with other approaches. As long as people experience a safe opportunity to have a meaningful discussion that helps them address the emotional and other consequences of a conflict or a wrong, the process is beneficial.

5.2. Circles

A circle is a versatile restorative practice that can be used proactively, to develop relationships and build community or reactively, to respond to wrongdoing, conflicts and problems. Circles give people an opportunity to speak and listen to one another in an atmosphere of safety, decorum and equality. The circle process allows peo-

ple to tell their stories and offer their own perspectives (Pranis, 2005).

The circle has a wide variety of purposes: conflict resolution, healing, support, decision making, information exchange and relationship development. Circles offer an alternative to contemporary meeting processes that often rely on hierarchy, win-lose positioning and argument (Roca, Inc., n.d.).

Circles can be used in any organizational, institutional or community setting. Circle time (Mosley, 1993) and morning meetings (Charney, 1992) have been widely used in primary and elementary schools for many years and more recently in secondary schools and higher education (Mirsky, 2007, 2011; Wachtel & Wachtel, 2012). In industry, the quality circle has been employed for decades to engage workers in achieving high manufacturing standards (Nonaka, 1993). In 1992, Yukon Circuit Court Judge Barry Stewart pioneered the sentencing circle, which involved community members in helping to decide how to deal with an offender (Lilles, 2002). In 1994, Mennonite Pastor Harry Nigh befriended a mentally challenged repeat sex offender by forming a support group with some of his parishioners, called a circle of support and accountability, which was effective in preventing re-offending (Rankin, 2007).

Circles may use a sequential format. One person speaks at a time, and the opportunity to speak moves in one direction around the circle. Each person must wait to speak until his or her turn, and no one may interrupt. Optionally, a talking piece—a small object that is easily held and passed from person to person—may be used to facilitate this process. Only the person who is holding the talking piece has the right to

speak (Costello, Wachtel, & Wachtel, 2010). Both the circle and the talking piece have roots in ancient and indigenous practices (Mirsky, 2004a, 2004b; Roca, Inc., n.d.)

The sequential circle is typically structured around topics or questions raised by the circle facilitator. Because it strictly forbids back-and-forth argument, it provides a great deal of decorum. The format maximizes the opportunity for the quiet voices, those that are usually inhibited by louder and more assertive people, to speak without interruption. Individuals who want to respond to something that has been said must be patient and wait until it is their turn to speak. The sequential circle encourages people to listen more and talk less (Costello, Wachtel, & Wachtel, 2010).

Although most circle traditions rely on a facilitator or circle keeper who guides but does not control (Pranis, Stuart & Wedge, 2003), a circle does not always need a leader. One approach is simply for participants to speak sequentially, moving around the circle as many times as necessary, until all have said what they want to say. In this case, all of the participants take responsibility for maintaining the integrity and the focus of the circle.

Non-sequential circles are often more freely structured than a sequential circle. Conversation may proceed from one person to another without a fixed order. Problem-solving circles, for example, may simply be focused around an issue that is to be solved but allow anyone to speak. One person in the group may record the group's ideas or decisions.

A Real Justice restorative conference, however, employs a different kind of fixed order. Participants sit in

a circle, and the conference facilitator uses the order of speakers defined by the conference script (offender, victim, victim supporter, offender supporter) to ask each person a set of restorative questions (O'Connell, Wachtel, & Wachtel, 1999). In effect, the facilitator serves as the talking piece, determining whose turn it is to speak without interruption. After everyone has responded to restorative questions, the facilitator moves to a more open, back-and-forth, non-ordered discussion of what the victim needs and how those needs might be met.

A sequential restorative circle may be used instead of a formal conference to respond to wrongdoing or a conflict or problem. The restorative circle is less formal because it does not typically specify victims and offenders and does not follow a script. However, it may employ some of the restorative questions from within the conferencing script (Costello, Wachtel, & Wachtel, 2010).

Another circle format is the fishbowl. This consists of an inner circle of active participants who may discuss an issue with a sequential approach or engage in a non-sequential activity such as problem-solving. Outside the inner circle are observers arranged in as many concentric circles as are needed to accommodate the group. The fishbowl format allows others to watch a circle activity that might be impractical with a large number of active participants. A variation of the fishbowl format has an empty chair in the inner circle that allows individual observers to come forward one at a time, sit in the empty chair, say something and then return to the outer circle—permitting a limited amount of participation by the observers (Costello, Wachtel, & Wachtel,

2010).

5.3. Family Group Conference (FGC) or Family Group Decision Making (FGDM)

Originating in New Zealand with the Children, Young Persons and Their Families Act in 1989, the legislation created a process called the family group conference (FGC), which soon spread around the world. North Americans call this process family group decision making (FGDM). The most radical feature of this law was its requirement that, after social workers and other professionals brief the family on the government's expectations and the services and resources available to support the family's plan, the professionals must leave the room. During this "family alone time" or "private family time," the extended family and friends of the family have an opportunity to take responsibility for their own loved ones. Never before in the history of the modern interventionist state has a government shown so much respect for the rights and potential strengths of families (Smull, Wachtel, & Wachtel, 2012).

FGC/FGDM brings together family support networks—parents, children, aunts, uncles, grandparents, neighbors and close family friends—to make important decisions that might otherwise be made by professionals. This process of engaging and empowering families to make decisions and plans for their own family members' well-being leads to better outcomes, less conflict with professionals, more informal support and improved family functioning (Merkel-Holguin, Nixon, & Burford, 2003).

Young people, who are usually the focus of these conferences, need the

sense of community, identity and stability that only the family, in its various forms, can provide. Families are more likely than professionals to find solutions that actively involve other family members, thus keeping the child within the care of the family, rather than transferring care of the child to the government. Also, when families are empowered to fix their own problems, the very process of empowerment facilitates healing (Rush, 2006).

The key features of the New Zealand FGC/FGDM model are preparation, information giving, private family time, agreeing on the plan and monitoring and review. In an FGC/FGDM, the family is the primary decision maker. An independent coordinator facilitates the conference and refrains from offering preconceived ideas of the outcome. The family, after hearing information about the case, is left alone to arrive at their own plan for the future of the child, youth or adult. Professionals evaluate the plan with respect to safety and legal issues and may procure resources to help implement the plan. Professionals and family members monitor the plan's progress, and often follow-up meetings are held (Morris & Maxwell, 1998).

5.4. Informal Restorative Practices

The restorative paradigm is manifested in many informal ways beyond the formal processes. As described by the restorative practices continuum above, informal restorative practices include affective statements, which communicate people's feelings, as well as affective questions, which cause people to reflect on how their behavior has affected others (McCold & Wachtel, 2001).

A teacher in a classroom might em-

ploy an affective statement when a student has misbehaved, letting the student know how he or she has been affected by the student's behavior: "When you disrupt the class, I feel sad" or "disrespected" or "disappointed." Hearing this, the student learns how his or her behavior is affecting others (Harrison, 2007).

Or that teacher may ask an affective question, perhaps adapting one of the restorative questions used in the conference script. "Who do you think has been affected by what you just did?" and then follow-up with "How do you think they've been affected?" In answering such questions, instead of simply being punished, the student has a chance to think about his or her behavior, make amends and change the behavior in the future (Morrison, 2003).

Asking several affective questions of both the wrongdoer and those harmed creates a small impromptu conference. If the circumstance calls for a bit more structure, a circle can quickly be created.

The use of informal restorative practices dramatically reduces the need for more time-consuming formal restorative practices. Systematic use of informal restorative practices has a cumulative impact and creates what might be described as a restorative milieu—an environment that consistently fosters awareness, empathy and responsibility in a way that is likely to prove far more effective in achieving social discipline than our current reliance on punishment and sanctions (Wachtel, 2013).
