

Single Sign-on Service Program Overview

ClassLink Program Overview

Nassau Districts have overwhelmingly expressed interest in a single sign-on solution for use in their districts.

ClassLink's OneClick application is a single sign-on solution that Nassau BOCES determined would be a good fit by greatly benefiting districts' ability to maximize teaching time

Contract negotiations are in progress with ClassLink to allow Nassau BOCES to provide the service to our districts

Pricing & Support Strategy

Nassau BOCES will take advantage of discounts and volume pricing to reduce per-user cost to the Nassau districts

Nassau BOCES will provide infrastructure support to make the solution more efficient and cost effective

Support

ClassLink will provide training to district in-house personnel to make them self-sufficient in handling simple, “every-day” calls.

Nassau BOCES will provide an escalation path to field calls beyond the capability of local district support people

Finally, Nassau BOCES will escalate tickets that may need additional technical help

Pricing

Nassau BOCES will aggregate product orders from all participating districts and place a single volume priced order

To open the program Nassau BOCES will provide an initial “not-to-exceed” price to insure we meet a minimum volume order

With 20% or more participation in the program, we expect to reduce the final billing price by 25%

Roll-out

Training will be made available via video conference and onsite at a BOCES facility shortly before the installations

Roll-out will take place on a first come, first serve basis

Estimated Annual Per User Pricing

Initial (NTE) per user pricing will discount approximately 20% off retail with a final target price of 40% off retail

Onetime connection cost for the OneClick product will be: \$1895 (due at the time of registration along with the anticipated number of users to be purchased)

Billing will be based on the final adjusted price

OneRoster Option

OneRoster is a clearinghouse application for student data shared between the district and authorized third party vendors utilizing an software API

OneRoster software is free with the purchase of OneClick subscriptions, but requires an annual hosting fee of: \$590

Any district interested in taking advantage of this service can indicate their interest on the initial registration form

The fee will be added to the annual billing

OneRoster Installation

Districts may work directly with their third-party vendors to take advantage of the OneRoster feature for implementing automated data transfers

When implementing OneRoster, districts will need to provide an additional release form for vendors not currently partnering with Nassau BOCES

Nassau BOCES will provide limited assistance for the implementation of this feature

More Information

Detailed information will follow in an official letter to the districts

As additional information becomes available, we will forward updates to the districts periodically

We look forward to your participation

THANK YOU
